

# Scales of Demo Track

# Car Motor Speed

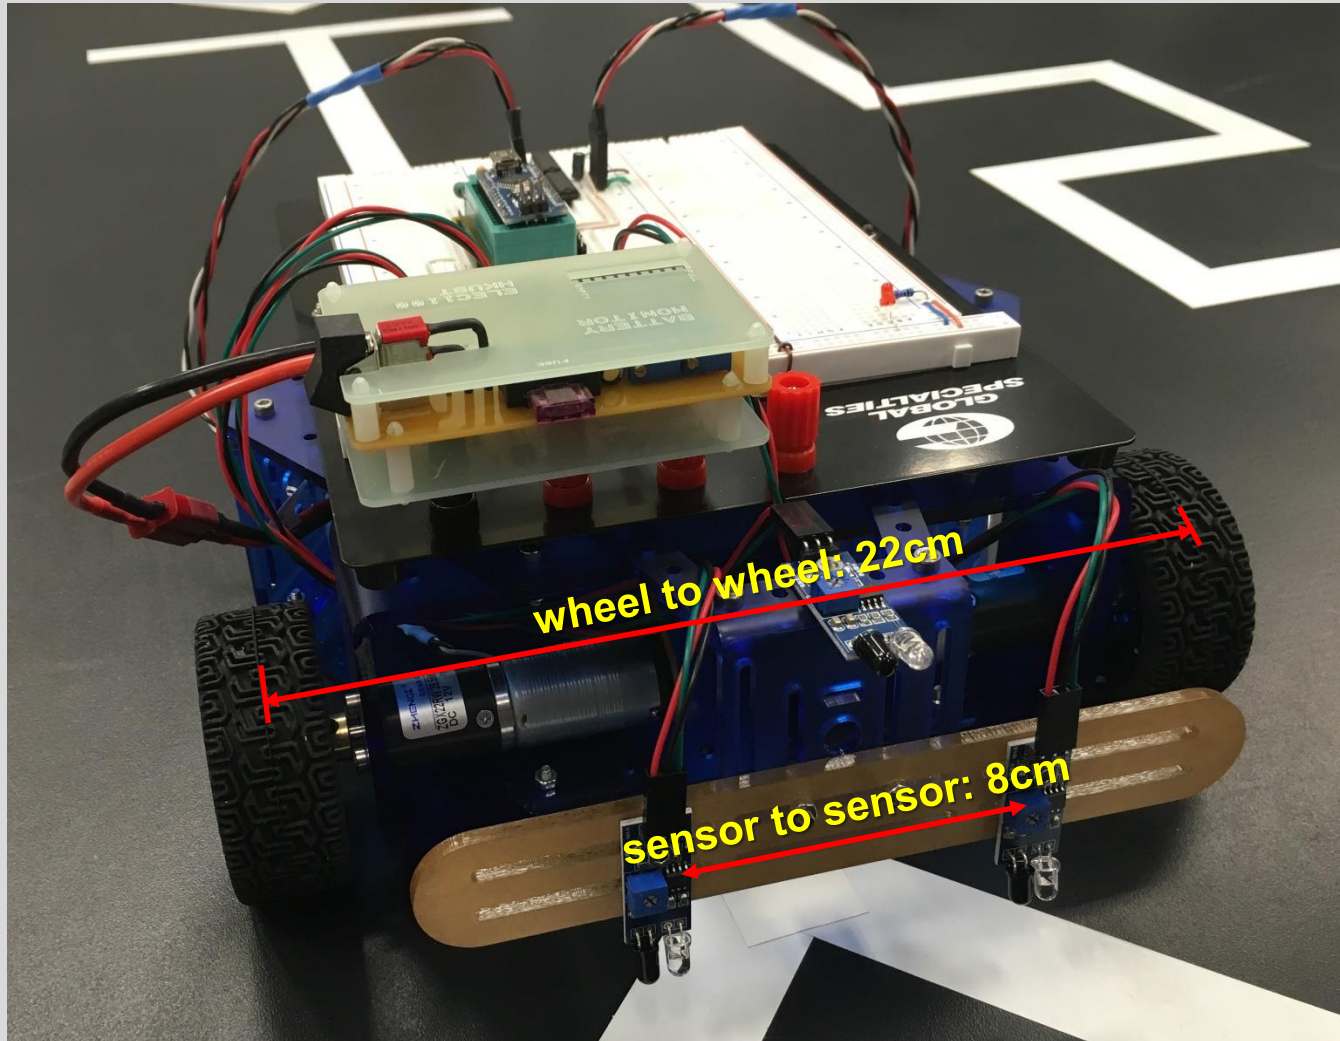

(approximated values, for your reference only)

- PWM = 100% (255), ~60cm/s
- PWM = 50% (127), ~40cm/s

Note: The speed is only an average value and it may not be in linear relationship to duty cycle, most likely due to motor's inertia and discharge effect.

# Car Dimension

(approximated values, for your reference only)

# Car Dimension
